How would you like to virtually guarantee any article you write and submit to EzineArticles will rank on the front page of Google?

I actually discovered this technique for ezinearticles traffic a few weeks ago. At the time I was trying to determine which article directories were worth submitting to on the basis of "do they rank" on Google.

What I found is you can often find EzineArticles.com, Buzzle.com, ArticleBase.com and ArticleCity.com articles ranking well. The other, smaller directories? Not so much.

So one powerful technique would be to write a nicely researched, keyword-rich article and submit it to ezinearticles first. Once approved (because they only accept unique content), then rewrite this original article and submit to the other three directories. Now you have 4x the chance of getting your article to rank and, sometimes, will even rank numerous times for the same keyword.

But if you want to dramatically increases your ezinearticle results chances...

Ezinearticles Traffic System Revealed

Ezinearticles Results Virtually Guaranteed

See how that works? We basically go get a list of all the keywords we might want to rank for. The [External Google Keyword Tool](#) works well for this.

Next, open up a copy of [Market Samurai](#) and open the "Rank Tracker" function. Add ezinearticles.com to the domain section. Change the google results to check on the first 10 positions (the first page).

Hit CHECK RANK and let it roll. When complete you will see all the ezinearticles results displayed. That is, all the articles that currently rank on the first page of google for that particular keyword.

This means YOU NOW KNOW, for whatever reason, Google likes this particular article for this particular keyword. So all you have to do is write an article optimized for the SAME KEYWORD and get more backlinks to it than the article that currently ranks. That's it! Done deal. Watch your ezinearticles traffic explode.

You can also add all four of the major article directories in the domain area and see if any of them are currently ranking articles for the keyword you want. If so, write an article... submit it to the same directory... get more backlinks than the current article has... and voila!
